Lithuania

A Baltic country located in Northern Europe, population of 2.8 million people.

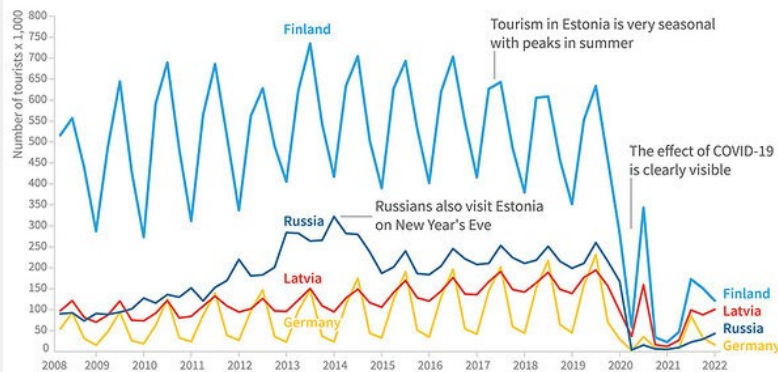

Background

Inspired by Estonian use case: producing official international travel statistics, using mobile phone data since 2008.

In Estonia, tourism peaks in summer and most foreign tourists come from Finland

Number of inbound tourists in Estonia per quarter, 2008–2022

Complete Case Study

Module 2 Use Case – Tourism in Lithuania

Background

Origins

- Inspired by the successful Estonian model for producing continuous inbound and outbound tourism statistics since 2009, Lithuania saw an opportunity to implement a similar Mobile Phone Data (MPD) project to better analyse its tourism markets and create more effective marketing campaigns. The Estonian model is a result of a long-standing collaboration between the Central Bank of Estonia and Positium. A significant distinction in Lithuania's method is its heightened focus on spatial and temporal granularity.
- A pilot project including 6 months of data (May to October 2021) was launched in 2021.
- The production of tourism statistics continued in 2022, with a continuous data period starting from April 2022. A publicly available downloadable dataset and dashboards can be found on the Lithuania Travel website:
<https://lithuania.travel/lt/profesionalams/tyrimai-ir-duomenys/mobiliuju-duomeny-projektas>.

Stakeholders

The three main partners involved in the project are:

1. Lithuania Travel (national tourism promotion agency) as project manager
2. Tele2 Lithuania as data provider
3. Positium as data processor

The GDF-MPD window is a multi-partner window funded by the Spanish Government, Ministry of Economy, Commerce and Business. The GDF-MPD program is jointly managed by DEC (DECDG, DIME), Poverty and Digital Development Global Practices in technical partnership with the International Telecommunications Union (ITU).
